

Taking security to new heights

At Corps Security, we're elevating the standard of modern protection. In partnership with Security Drone Group, experts in advanced aerial surveillance and AI-powered security solutions, we now offer pioneering drone services that deliver enhanced safety, greater visibility, and rapid response across expansive and complex sites.

Our mission has always been to ensure the safety of people and property. Now, with state-of-the-art drone technology, we bring a sharper eye in the sky to support teams on the ground and help you stay one step ahead of threats. Drones supplement traditional security methods and offer extensive, rapid surveillance of large or difficult-to-access areas, providing real-time intelligence for faster response and threat assessment.

Our drones are designed to fly safely over populated areas, featuring lightweight construction, advanced sensors, and real-time weather adjustments. We handle all necessary permissions and ensure full compliance with data protection and Civil Aviation Authority (CAA) regulations.

Enhance your operational efficiency

Our cutting-edge drones deliver:

- A strong and visible deterrent – An aerial presence discourages unauthorised activity.
- Extended coverage – Enhance existing CCTV infrastructure and monitor large areas with fewer blind spots.
- Automated patrolling – Regular, consistent perimeter checks.
- Real-time monitoring – Live video feeds sent directly to your nominated monitoring facility (on or off site).
- Rapid incident response – Immediate reaction to perimeter incursions.
- Cost-efficiency – Demonstrable return on investment.
- Protective scalability – Easily expandable to provide effective counter-measures.
- Cross functionality – Support for facilities management practices such as assisting with roof or gutter inspections.

SDG
SECURITY DRONE GROUP

ENVIRONMENTALLY RESPONSIBLE SECURITY

We are committed to minimising our environmental impact through:

Low-noise propellers
Reduces acoustic disruption.

Wildlife-safe flight paths
Minimises interference with local ecosystems.

Sustainable energy use
Solar-powered charging stations available.

Ready to deploy drone security?

Tailored solutions for every site

We offer drone solutions suited to most environments and applications including:

- Corporate headquarters
- Industrial estates
- Construction sites
- Ports and transport hubs
- Multi-building campuses
- Major public events

Surveillance features:

We offer custom aerial security packages for:

- **Aerial & perimeter monitoring** – High-resolution cameras for broad-area coverage.
- **Thermal imaging** – Detects heat sources for superior night-time visibility.
- **AI integration** – Identifies and assesses potential threats in real time.

Robust data management & security:

- **Secure cloud storage** – Scalable, encrypted archiving of surveillance footage.
- **End-to-end encryption** – Ensures data compliance and security.
- **AI analytics** – Delivers actionable insights to aid operational decisions.

Seamless system integration:

- **CCTV enhancement** – Complements existing systems with mobile aerial support.
- **Access control synchronisation** – Integrates with gate and door systems and assesses potential threats in real time.
- **Alarm system response** – Automatically deploys drones in response to triggers.

Flexible delivery models

We begin with a comprehensive site audit to identify the most effective drone technology for your specific requirements. Our aerial surveillance solutions integrate seamlessly with existing monitoring infrastructure. Alternatively, if you prefer to manage operations in-house, we can guide you in selecting the right drone system and provide fully comprehensive training to equip your security and estates team with the skills they need.

Frequently Asked Questions

What are the benefits of utilising drones for security purposes?

Drones provide 24/7 automated surveillance across large areas, rapid emergency response to incidents, and enhanced safety for security personnel. They serve as a visible deterrent while offering real-time intelligence to control rooms during security breaches. Additional benefits include roof inspections, maintenance reporting, and reduced operational costs compared to traditional security methods.

How are organisations using drones to complete security tasks compared to manual alternatives?

Traditional foot patrols cover limited ground and can take time to respond to incidents. Drones complete full perimeter checks in under 10 minutes and can respond to alarms within 45 seconds. They also eliminate safety risks for personnel in dangerous areas and provide thermal imaging capabilities that surpass human vision, especially during night operations.

How do drones integrate with our existing security systems?

Our drones seamlessly connect with CCTV networks, access control systems and alarm monitoring platforms. When integrated, they automatically respond to triggered alarms and can provide live feeds directly to your nominated monitoring facility (on or off site).

Do you offer managed services?

Yes, we offer a fully managed service including operations and monitoring.

How much will a drone system cost?

We offer competitive solutions tailored to your needs. Please contact us to discuss your requirements.

What's involved in the site audit process?

Our technical team conducts a thorough assessment of your site's layout, security requirements, internet connectivity and potential drone dock locations. We identify optimal flight paths, assess any operational restrictions and create a bespoke security solution tailored to your specific needs.

Can we trial the system before committing?

Absolutely. We can conduct comprehensive three-day trials at your site. Day one covers setup and connectivity testing, day two focuses on daytime operations and mission programming, and day three demonstrates night-time capabilities including thermal imaging. This allows you to evaluate the system's effectiveness before making any long-term commitment.

📞 Contact us at drones@corpsecurity.co.uk to discuss your requirements or arrange a trial.
